

AMENDMENTS TO THE DRAWINGS

In the subject Office Action, the drawings were objected to under 37 CFR 1.83(a) because it was stated that the drawings did not show every feature of the invention specified in the claims. In particular, it was stated that the transmitter and receiver in the infrared sensor and in the flush valve in Figures 1A-1C must be shown. In addition, the drawings were objected to under 37 CFR 1.84(h)(5) because it was stated that Fig. 1B shows modified forms of construction in the same view with the faucet system and the soap dispenser system. Upon consultation with Examiner Nguyen, it was determined that the modified forms of construction that should be separated into two figures are the faucet system and hand dryer system not the faucet system and soap dispenser system.

Accordingly, Applicants have amended the drawings to show the transmitter and receiver in every sensor and valve and/or operator. No new matter was added since the structures that have been added to the amended drawings represent the transmitter and receiver structures which were already disclosed in the specification. Specifically, element 10 was amended to show a transmitter and receiver indicated at 11 and 13 respectively. Element 12 was amended to show a transmitter and receiver indicated at 15 and 17 respectively. Element 14 was amended to show a transmitter and receiver indicated at 19 and 21 respectively. Element 18 was amended to show a transmitter and receiver indicated at 39 and 41 respectively. Element 24 was amended to show a transmitter and receiver indicated at 23 and 25 respectively. Element 26 was amended to show a transmitter and receiver indicated at 27 and 29 respectively. Element 30 was amended to show a transmitter and receiver indicated at 35 and 37 respectively. Element 32 was amended to show a transmitter and receiver indicated at 31 and 33 respectively.

Element 42 was amended to show a transmitter and receiver indicated at 43 and 45 respectively. Element 44 was amended to show a transmitter and receiver indicated at 47 and 49 respectively.

In addition, Fig. 1B which originally depicted a faucet system and hand dryer system has been separated into two figures, Fig. 1B and Fig. 1D. Fig. 1B now depicts the hand dryer system and Fig. 1D depicts the faucet system.

A replacement drawing sheet showing the amended figures which include the suggested changes is attached and the end of this paper and labeled **REPLACEMENT SHEET**. Formal drawings will be submitted when the application is allowed.

Therefore, Applicants respectfully request reconsideration and withdrawal of the objections to the drawings.
